

HITACHI TRANSISTORS

— FOR AUDIO FREQUENCY OUTPUT AMPLIFIER USE —

2SB370 2SB370A

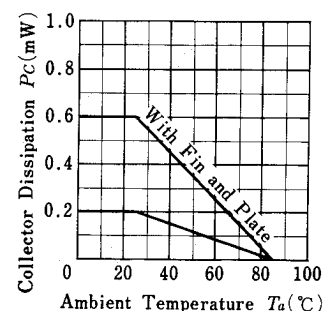

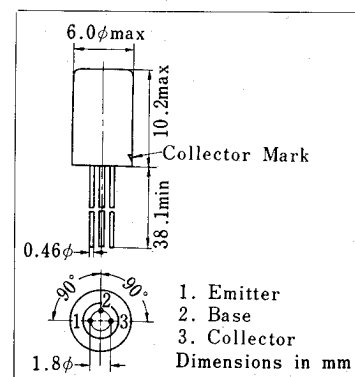

The Hitachi 2SB370 and 2SB370A are germanium PNP alloyed junction type transistors, intended for use as audio frequency output stage amplifiers, with such features as relatively large allowable collector dissipation in small dimension and linear dependency of current transfer ratio on collector current up to rated value.

These transistors are effectively used as medium power output stage amplifiers of portable radios, car radio receivers, tape recorders, and so on.

(Note 1) When $V_{CC} = -9, -12V$, attach the output pair on the heat sink plate (100mm×100mm×1.5mm Al-plate) by using heat sink fin NZ16, or NZ1B.

(Note 2) Secondary impedance and DC resistance of driver transformer are specified as follows.
For Circuit 2: Value of Each Winding
For Circuit 3: Value of Base to Base

(Note 3) For Circuit 3 (Class B P-P Amp)
Load resistance R_L is specified by primary impedance of output transformer (Collector to Collector)
