## Analog CMOS Latchable Multiplexers

April 1999

### Features

- Direct RESET
- TTL and CMOS Compatible Address and Enable Inputs
- Maximum Power Supply Rating . . . . . 44V
- Break-Before-Make Switching
- Alternate Source

### Applications

- Data Acquisition Systems
- Communication Systems
- Automatic Test Equipment
- Microprocessor Controlled Systemd

### Description

The DG526, DG527, DG528, and DG529 are CMOS Monolithic 16-Channel/Dual 4-Channel Analog Multiplexers. Each device has on-chip address and control latches to simplify design in microprocessor based applications. The DG526 uses 4 address lines to control its 16 channels; the DG527, DG528 both use 3 address lines to control their 8 channels; and the DG529 uses 2 address lines to control its 4 channels. The enable pin is used to enable the address latches during the  $\overline{WR}$  pulse. It can be hard wired to the logic supply if one of the channels will always be used (except during a reset) or it can be tied to address decoding circuitry for memory mapped operation. The  $\overline{RS}$  pin is used to clear all latches regardless of the state of any other latch or control line. The  $\overline{WR}$  pin is used to transfer the state of the address control lines to their latches, except during a reset or when EN is low.

A channel in the ON state conducts signals equally well in both directions. In the OFF state each channel blocks voltages up to the supply rails. The address inputs,  $\overline{WR}$ ,  $\overline{RS}$  and the enable input are TTL and CMOS compatible over the full specified operation temperature range.

### Part Number Information

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.

## Absolute Maximum Ratings

V+ to V- . . . . .	+44V
V- to Ground . . . . .	-25V
V <sub>IN</sub> to Ground (Note 1) . . . . .	(V- - 2V), (V+ + 2V)
V <sub>S</sub> or V <sub>D</sub> to V+ (Note 1) . . . . .	+2V, (V- - 2V)
V <sub>S</sub> or V <sub>D</sub> to V- (Note 1) . . . . .	-2V, (V+ + 2V)
Current, Any Terminal Except S or D . . . . .	30mA
Continuous Current, S or D . . . . .	20mA
Peak Current, S or D . . . . .	40mA
(Pulsed at 1ms, 10% Duty Cycle Max)	

## Operating Conditions

Operating Temperature	
C Suffix . . . . .	0°C to 70°C
B Suffix . . . . .	-25°C to 85°C
A Suffix . . . . .	-55°C to 125°C

## Thermal Information

Thermal Resistance (Typical, Note 1)	$\theta_{JA}$ (°C/W)	$\theta_{JC}$ (°C/W)
18 Ld PDIP Package . . . . .	90	N/A
18 Ld CERDIP Package . . . . .	75	22
18 Ld SOIC Package . . . . .	95	N/A
28 Ld PDIP Package . . . . .	60	N/A
28 Ld CERDIP Package . . . . .	55	18
28 Ld SOIC Package . . . . .	70	N/A
Maximum Junction Temperature		
Ceramic Packages . . . . .	175°C	
Plastic Packages . . . . .	150°C	
Maximum Storage Temperature Range		
C Suffix . . . . .	-65°C to 125°C	
A and B Suffix . . . . .	-65°C to 150°C	
Maximum Lead Temperature (Soldering 10s) . . . . .	300°C	
(SOIC - Lead Tips Only)		

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

## NOTE:

1.  $\theta_{JA}$  is measured with the component mounted on an evaluation PC board in free air.

## Electrical Specifications (Note 3) V+ = +15V, V- = -15V, GND = 0V, WR = 0V, RS = 2.4V, EN = 2.4V, T<sub>A</sub> = 25°C, Unless Otherwise Specified

RESET Pulse Width, $t_{RS}$	$\overline{RS}$ , (Note 6), $V_S = 5V$ , See Figure 2	500	ns

## NOTES:

1. Signals on  $V_S, V_D$  or  $V_{IN}$  exceeding  $V+$  or  $V-$  will be clamped by internal diodes. Limit diode forward current to maximum current ratings.
2. Typical values are for design aid only, not guaranteed and not subject to production testing.
3. The algebraic convention whereby the most negative value is a minimum, and most positive value is a maximum, is used in this datasheet.
4. OFF Isolation =  $20 \frac{|V_S|}{|V_D|}$ , where  $V_S$  = input to OFF switch, and  $V_D$  = output due to  $V_S$ .
5.  $I_{D(ON)}$  is leakage from driver into "ON" switch.
6. Period of Reset ( $\overline{RS}$ ) pulse must be at least 50 $\mu$ s during or after power ON.
7. Parameter not tested. Parameter guaranteed by design or characterization.

Logic "1": V<sub>AH</sub> ≥ 2.4V

Logic "0": V<sub>AL</sub> ≤ 0.8V

## Die Characteristics

### DIE DIMENSIONS:

3810 $\mu$ m x 2769 $\mu$ m

### METALLIZATION:

Type: Al

Thickness: 10k $\text{\AA}$   $\pm$  1k $\text{\AA}$

### PASSIVATION:

Type: PSG Over Nitride

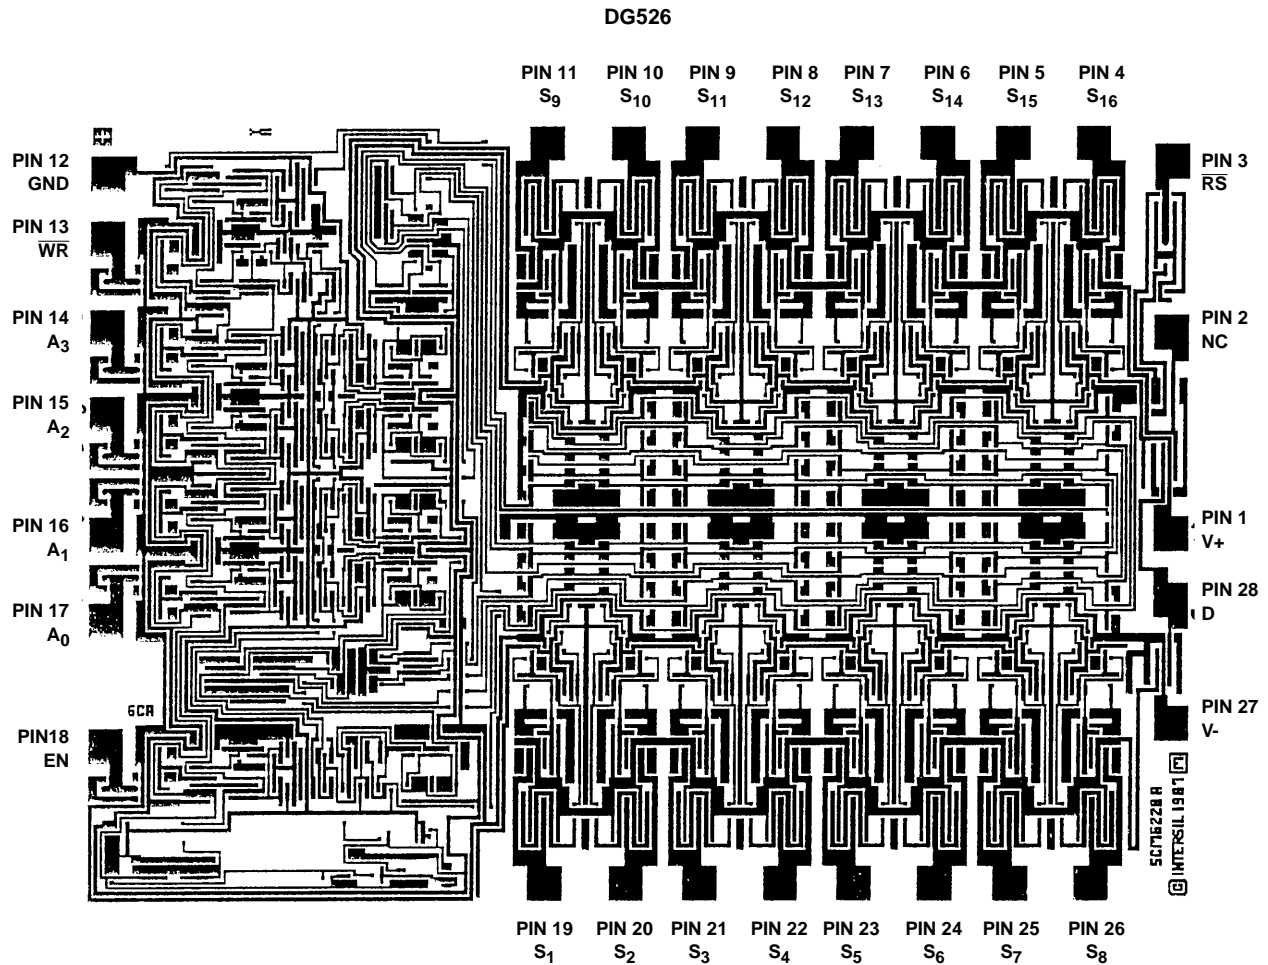

PSG Thickness: 7k $\text{\AA}$   $\pm$  1.4k $\text{\AA}$

Nitride Thickness: 8k $\text{\AA}$   $\pm$  1.2k $\text{\AA}$

### WORST CASE CURRENT DENSITY:

9.1 x 10<sup>4</sup> A/cm<sup>2</sup>

## Metallization Mask Layout

## Die Characteristics

### DIE DIMENSIONS:
