LND2931

100mA Low Dropout Voltage Regulator

GENERAL DESCRIPTION

This series of fixed-voltage and adjustable monolithic micropower voltage regulators is designed for a wide range of applications. This device is an excellent choice for use in battery-powered application. Furthermore, the quiescent current increases only slightly at dropout, which prolongs battery life. This series of fixed-voltage (Typ. 60mV at light load and 300mV at 100mA) includes a tight initial tolerance of 0.5% typ., extremely good load and line regulation of 0.05% typ., and very low output temperature coefficient. This series of fixed-voltage and adjustable regulators is offered in 3-pin TO-92 package (TO-220-5, SO-8 for LND2931) compatible with other fixed-voltage regulators.

PIN CONFIGURATION

FEATURES

- 3-terminal regulators (TO-220-5, SO-8 for LND2931)
- 100mA output within 2% over temperature
- Very low quiescent current
- Low dropout voltage (300mV Typ)
- Extremely tight load and line regulation
- Very low temperature coefficient
- Current and thermal limiting
- Unregulated DC input can withstand -20V reverse battery and +60V positive transients
- Direct replacement for National LM2931 fixed series, but has lower ground current, higher accuracy of output voltage and extremely tight load and line regulation. For adjust model LND2931 see typical applications on figure 2.

APPLICATIONS

- High-efficiency linear regulators
- Battery powered systems
- Portable/Palm top/ Notebook Computers
- Portable consumer equipment
- Portable instrumentation
- Automotive Electronics
- SMPS Post Regulator

ABSOLUTE MAXIMUM RATINGS

Power Dissipation	Internally Limited
Lead Temperature(Soldering, 5 seconds)	260°C
Storage Temperature Range	-65°C to +150°C
Operating Junction Temperature Range	-55°C to +150°C
Input Supply Voltage	-20V to +35V

Note 1: Output or reference voltage temperature coefficients defined as the worst case voltage change divided by the total temperature range.

Note 2: Regulations are measured at constant junction temperature, using pulse testing with a low duty cycle. Changes in output voltage due to heating effects are covered under the specification for thermal regulation.

Note 3: Line regulation is tested at 150°C for $I_L = 1\text{mA}$, for $I_L = 100\mu\text{A}$ and $T_J = 125^\circ\text{C}$, line regulation is guaranteed by design to 0.2%. For LND2931-15 $16\text{V} \leq V_{in} \leq 26\text{V}$.

Note 4: Dropout voltage is defined as the input to output differential at which the output voltage drops 2% below its nominal value measured at 1V differential.

Note 5: Ground pin current is the regulator quiescent current. The total current drawn from the source is the sum of the ground pin current and output load current.

Note 6: Thermal regulation is the change in output voltage at a time T after a change in power dissipation, excluding load or line regulation effects. Specifications are for a 50mA load pulse (1.25W pulse) for T=10ms.

Note 7: $V_{ref} \leq V_{out} \leq (V_{in} - 1\text{V})$, $2.3\text{V} \leq V_{in} \leq 26\text{V}$, $100\mu\text{A} \leq I_L \leq 100\text{mA}$, $T_J \leq T_{jmax}$.

Note 8: $V_{shutdown} \geq 2\text{V}$, $V_{IN} \leq 26\text{V}$, $V_{out} = 0\text{V}$.
