

Protection of Lithium-Ion Batteries (for Double-Protect) Monolithic IC MM1451

Outline

This IC is used for double-protection of lithium-ion batteries with from one to three cells, and has an ultra-compact package. Short-circuits between cells accommodate series connections of one to three cells.

Features

- | | |
|--|--------------|
| 1. Overcharge detection voltage accuracy (0°C to 50°C) | ±50 mV/cell. |
| 2. Consumption current (V _{cell} =3.8V) | 3μA typ. |
| 3. Consumption current (V _{cell} =2.3V) | 0.3μA typ. |
| 4. Pin I/O current between cells (V _{cell} =3.8V) | 0.3μA max. |
| 5. Delay time on overcharge voltage detection (C _t =0.22μF) | 1.5S typ. |
| 6. Output current (V _{cell} =V _{CC} =4.5 V) | 500μA typ. |

Measuring Circuit

Application Circuit

Delay time $T_d(S) = 7 \times C_{Ct} (\mu F)$

Note 1: Can support 1, 2 or 3 cells by shorting each cell. However, be sure to connect a battery for V3 cell. V3 cell may not operate correctly when shorted.

Note 2: When connecting batteries, be sure to connect in the following order: GND → V3, and Vcc → V1OR V2.

Note 3: Output may go ON momentarily when starting up power supply. If this error output during startup becomes a problem, connect the Vcc pin last.

Note 4: Operation can not be guaranteed for connections other than the above.

Timing Chart

Note: Output goes low simultaneously with overcharge detection at Ct pin short and open.
