Electro-Optical Characteristics

All specifications apply when APD is at 23°C with a gain of 200 and a load resistance of 50 ohms.

HV bias/APD gain control realized by potentiometer located on backside of the module or remote 0 to +5V analog programming configured by jumper located on backside of the module.

Remote HV control ratio: 404 V per 1V (typical).

HV monitor ratio: 404 V per 1V (typical).

Temperature monitor output is 10mV/°K. (See National Semiconductor data sheet for LM335 temperature sensor.)

Recommended load on the amplifier output is from 50 ohms to 1 Mohm.

Modules can be modified or customized by Advanced Photonix to meet individual customer requirements.

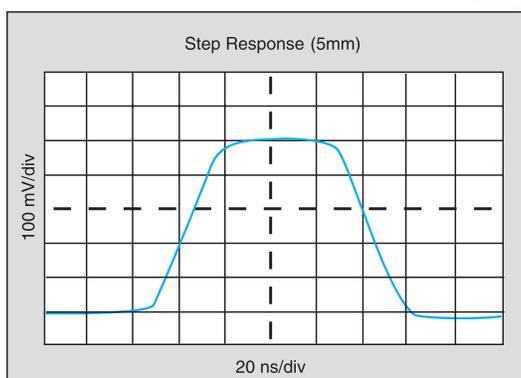

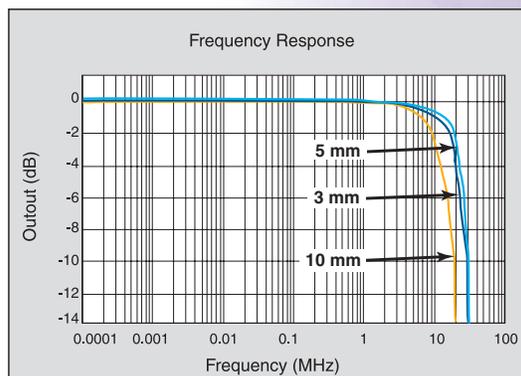

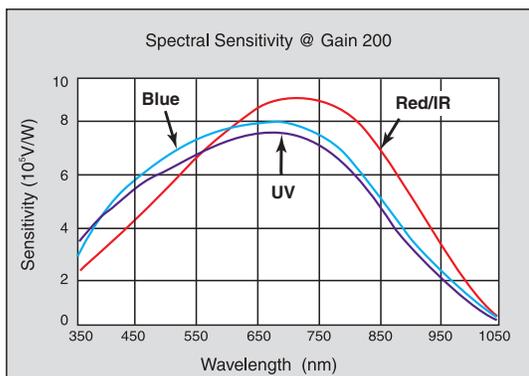

[◇] Operating beyond these limits may cause permanent damage to the device.

* Sensitivity and NEP for UV, Blue and Red/IR specified at wavelengths of 350nm, 500nm and 750nm, respectively.
