

16" Voice/Melody/LCD Controller (ViewTalk™ Series)

GENERAL DESCRIPTION

The W53300/W53320 are a high-performance 4-bit microcontroller (μ C) with built-in speech, melody and 16*48/32*48 LCD driver which includes internal pump circuit. The 4-bit uc core contains dual clock source, 4-bit ALU, two 8-bit timers, one divider, 20 pin input or output, 7 interrupt sources and 8-level subroutine nesting for interrupt applications. Speech unit can be implemented with Winbond 16-sec Power Speech using ADPCM algorithm. Melody unit provides dual tone output and can store up to 1k notes. Power reduction mode is also built in to minimize power dissipation. It is ideal for games, educational toys, remote controllers, watches, clocks and other application products which incorporate both LCD display and melody.

FEATURES

- Operating voltage: 2.4 volt ~ 5.5 volt
- Dual clock operating system
 - RC/Crystal (400 KHz to 4 MHz) for main clock
 - 32.768 KHz crystal oscillation circuit for sub-oscillator
- Memory
 - Program ROM: 16K \times 20
 - Data RAM: 512 \times 4 bit (W53320), 704 \times 4 bit(W53300)
 - LCD RAM: 384 \times 4 bit (W53320), 192 \times 4 bit (W53300)
- 20 input/output pins
 - Ports for input only: 2 ports/8 pins
 - Input/output ports: 2 ports/8 pins
 - Port for output only: 1 port /4 pins
- Power-down mode
 - Hold function: no operation (except for oscillator)
- Seven types of interrupts
 - Five internal interrupts (Divider ,Timer 0, Timer 1, Speech, Melody)
 - Two external interrupts (Port RC, Port RD)
- One built-in 14-bit clock frequency divider circuit
- Two built-in 8-bit programmable countdown timers
 - Timer 0: one of two internal clock frequencies (FOSC/4 or FOSC/1024) can be selected
 - Timer 1: built-in auto-reload function includes internal timer, external event counter from RC.0 or TONE output function (can be used as IR carrier output if main clock is 455 kHz)
- Built-in 18/14-bit watchdog timer for system reset by mask code option
- Powerful instruction sets
- 8-level subroutine (including interrupt) nesting

- LCD driver output
 - 32 com × 48 seg (W53320), 16 com × 48 seg (W53300)
 - 1/16 or 1/32 duty, 1/5 or 1/7 bias, internal pump circuit option by special register
- Speech function
 - Provides 384 kbits dedicated speech ROM
 - Direct driving output for speaker
 - Maximum 256 sections available
- Melody function
 - Provides 22 kbits dedicated melody ROM
 - Provides 6 kinds of beat, 16 kinds of tempo, and pitch range from G3# to C7
 - Tremolo, triple frequency and 3 kinds of percussion available
 - Direct driving output for speaker
 - Maximum 32 scores available
- Mix speech with melody available
- Multi-engine controller
- PWM output current option
- Chip On Board available

PIN DESCRIPTION

SYMBOL	I/O	FUNCTION
XIN	I	Input pin for oscillator. It can be connected to crystal, or can connect a resistor to VDD to generate main system clock. Oscillator can be stopped when SCR.1 is set to logic 1.
XOUT	O	Output pin for oscillator which is connected to another crystal pin.
X32I	I	32.768 KHz crystal input pin.
X32O	O	32.768 KHz crystal output pin.
RA0 ~ RA3	I/O	General Input/Output port specified by PM1 register. If output mode is selected, PM0 register can be used to specify CMOS/NMOS driving capability option. Initial state is input mode.
RB0 ~ RB3	I/O	General Input/Output port specified by PM2 register. If output mode is selected, PM0 register can be used to specify CMOS/NMOS driving capability option. Initial state is input mode.
RC0 ~ RC3	I	4-bit schmitt input with internal pull high option specified by PM0 register. RC0 can be used as clock source for Timer 1. Each pin has an independent interrupt capability specified by PEFL special register.
RD0 ~ RD3	I	4-bit schmitt input port with internal pull high option specified by PM0 register. Each pin has an independent interrupt capability specified by PEFH special register.
RE0~RE3/TONE	O	Output port only. RE3 may use as TONE if bit 0 of MR0 special register is set to logic 1.
RES	I	System reset pin with internal pull-high resistor is active low.
TEST	I	Test pin. No connect for normal use.
ROSC	I	Connects resistor to VDD to generate speech or melody clock source.
VDDP	I	Power source for PWM output.
LED1	O	Synchronous LED1 output while speech play/melody is active.
LED2	O	Synchronous LED2 output only while speech play is active.
PWM1	O	Speaker direct driving output 1 while speech or melody is active.
PWM2	O	Speaker direct driving output 2 while speech or melody is active.
SEG0~SEG47	O	LCD segment output pins.
COM0~COM31	O	LCD common signal output pins. The LCD alternating frequency is fixed at 64Hz. COM16~31 are useless for W53300.
DH1, DH2	I	Connection terminals for voltage doubler capacitor.
VDD2	O	Connects a 1uF capacitor to VSS1 to double VDD voltage output if triple pump option is enabled. Otherwise, VDD2 connects to VDD directly if double pump option is enabled.
VDD3	O/I	An output if internal pump circuit is enabled. It connects a 1uF capacitor to VSS. Triple VDD voltage will be output if triple pump option is enabled. Otherwise, double VDD voltage will be output if double pump option is enabled. An input if internal pump voltage is disabled.

V2 ~ V5	O	LCD COM/SEG output driving voltage. If internal shunt resistor is disabled, external resistors need to be supplied to V2, V3, V4, V5 . A capacitor is suggested for stable LCD voltage level.
V6	I	External variable resistor connects between VDD3 and V6 to adjust LCD maximum voltage level.
VDD	I	Microcontroller Positive power supply (+).
VSS1	I	Negative power supply (-).
VSS2	I	Negative power supply (-).

ABSOLUTE MAXIMUM RATINGS

PARAMETER	RATING	UNIT
Supply Voltage to Ground Potential	-0.3 to +7.0	V
Applied Input/Output Voltage	-0.3 to +7.0	V
Power Dissipation	120	mW
Ambient Operating Temperature	0 to +70	°C
Storage Temperature	-55 to +150	°C
VDD3 Input Voltage	12	V

Note: Exposure to conditions beyond those listed under Absolute Maximum Ratings may adversely affect the life and reliability of the device.

TYPICAL APPLICATION CIRCUIT

- Note: 1.VCC2 supports high current driving capability to PWM1, PWM2, LED1 and LED2.
 2.Triple pump, 1/7 bias
 3. Two resistors could be added that one is V6~V5, and another V2~VSS for good display.

- Note: 1.VCC2 supports high current driving capability to PWM1, PWM2, LED1 and LED2.
2.Double pump, 1/5 bias
3.Two resistors could be added that one is V5~V6, another V2~VSS for good display.
